

*Technology, vision and care:  
our strenghts ever.*

**ITS Group: the best choice**

Quality, safety and efficiency of ITS technologies are guaranteed by constant collaboration with a highly qualified team of physicians, universities and engineers.

**We are proud to give you our best, always**

ITS Group provides, together with a high level technological production, a complete range of services for clients, which include:  
theoretical and scientific classes,  
practical courses, marketing, web marketing, 24 hours after-sale assistance and support to clients regarding the best solutions.

## Extraordinary technology at device's core

The core of Oxyproage technology is an advanced 4th-generation Zeolite filter equipped with a microporous crystalline structure, capable of producing hyperbaric oxygen with a purity of 96-98%.

Oxyproage draws ambient air making it pass through laminated mineral packs, which separate oxygen from carbon dioxide and nitrogen, channelling it in the appropriate airbrush, ready to perform its exceptional 'healing' functions.

This filtering technology is self-regenerating and does not require the replacement of mechanical parts, therefore it does not need any kind of maintenance.

## Most effective hyperbaric oxygen for the treatment of face, body and scalp

Oxyproage is a dermoinfusion oxygen – or hyperbaric oxygen – device for the treatment of the most common imperfections on face and body. It is also incredibly effective in scalp treatment, with trichological treatments for hair loss, dandruff, seborrhoea, greasy skin, sensitive skin, remineralising and restructuring.

Oxygen is a precious element, indispensable for the life of each cell that our body comprises. A natural and perfectly biocompatible component that encourages metabolic exchanges inside tissue, now available in the pure state with Oxyproage to be applied to very high-level beauty treatments.

Oxyproage hyperbaric oxygen is tested, safe and can be used both for delicate skin of the face and for areas of the body that require **specific and truly effective treatments**. Combined with our exclusive latest-generation nanostructured cosmeceutics line, it ensures a new youthfulness, giving brightness to skin.

## Why choose OxyProAge Hyperbaric Oxygen:

- ✓ It can effectively treat a wide range of imperfections.
- ✓ It is the only treatment that can effectively treat eyelids.
- ✓ Can be combined with a wide range of nanostructured serums specifically designed for oxygen.
- ✓ You can easily insert it in work protocols that you already use.
- ✓ Equipped with a miniature camera to monitor skin blemishes.
- ✓ An easy and intuitive touchscreen display, with pre-set protocols and possibility of extensive customisation of treatments.

Available in combination with Rinnova Plus Frax

### A high precision airbrush

Oxyproage is equipped with a high precision airbrush that allows you to mix the correct amount of oxygen with specific serums. Its micromechanical specification ensures the reduction of functional liquid into microscopic droplets that bind with oxygen and are transported to the deep layers of dermis in order to perform their healing function. Fitted with a 5-ml vial, it is capable of delivering oxygen at an absolute pressure of 1.8 bar ensuring an excellent penetration of functional substances and complete tissue oxygenation.

## How does Oxyproage Hyperbaric Oxygen work?

The research and development activities of ITS Group technicians has led to the development of a new and sophisticated technology that combines Dermo-Infusion Oxygen with nanostructured active substances.

Oxyproage, due to its highly sophisticated 4th-generation Zeolite filter, delivers pure hyperbaric oxygen at a percentage of 96-98%. The combination with highly performing nanotechnological serums allows brilliant results to be obtained in a short time on tissue tropism and on overall performance.

The pure oxygen, filtered and delivered to skin by the continuous propulsion of 3 litres per minute, carries the nanostructured sprayed substances, which can thus be transported deep into the dermis to perform their function by accelerating the metabolism and by oxygenating tissue.

The synergistic action of the Dermo-Infusion Oxygen and our exclusive line of nanostructured cosmeceutics gives a unique and lasting result.

## Results

- Significant results right from the first few sessions
- Eyelids treatment
- Exclusive treatment protocols with stable results over time

Results after 1 session

Results after 3 sessions

### A wide range of functional serums that enhance the effectiveness of treatment

We have studied a wide range of nanotechnological serums specifically designed to work in perfect synergy with oxygen.

In particular, we have formulated a specific Oxygen Booster serum, able to significantly increase the consumption of oxygen by cells; this limits the effects of oxidation of tissue, reducing the production of free radicals, a cause of premature ageing of the skin.
