

*Technology, vision and care:  
our strenghts ever..*

**ITS Group: the best choice**

Quality, safety and efficiency of ITS technologies are guaranteed by constant collaboration with a highly qualified team of physicians, universities and engineers.

**We are proud to give you our best,  
always**

ITS Group provides, together with a high level technological production, a complete range of services for clients, which include: theoretical and scientific classes, practical courses, marketing, web marketing, 24 hours after-sale assistance and support to clients regarding the best solutions.

## Extraordinary technology at device's core

The pulsating core of Soft Touch shock waves device is the handprobe with **latest-generation ballistic technology**: an exclusive system of electromagnetic propulsion that eliminates leakages caused by traditional compressed air systems.

Exclusive materials used in the construction ensures a **rapid rise in pressure in an infinitesimal period** with high peak pressures.

A **technologically advanced system** that allows pressure pulses to be obtained applied to tissue 1000 times longer than those of simple shock waves, with **results that until recently seemed impossible**.

## The new generation of Shock Waves to treat imperfections caused by cellulite

Soft Touch is the new shock waves technology created by ITS Group to **treat imperfections caused by cellulite and the effect of orange peel skin**: a new **radial shock waves system** that concentrates energy in a defined area in the same way as focused ones would do, taking advantage of all the possible benefits.

We have devised a **new electromagnetic generator**, thus avoiding all energy dispersion problems of traditional compressed air systems. An **unprecedented emission technology** of 5 cm<sup>2</sup> to transfer an impressive quantum of energy, that works in conjunction with a vacuum system by reducing undesired traction waves and ensuring excellent treatment tolerability for the patient.

The vacuum system controlled by advanced management software allows the acoustic wave to be confined in fatty tissue, **concentrating energy only where it is needed** for the purposes of the results. By combining the vacuum with shock waves, we **stimulate 3 times more tissue volume** than conventional systems.

## Why choose Soft Touch shock waves:

- ✓ The only shock waves technology combined with a vacuum for the best tangible results..
- ✓ The vacuum makes treatment extremely localised so to avoid capillary fragility and varicose veins.
- ✓ A safe investment with an immediate return: an exceptional device, guaranteeing long-term earnings, can be immediately yours.
- ✓ Fast treatments and visible results immediately without recovery times.
- ✓ Lasting and visible overall improvement in tissue texture.
- ✓ An easy and intuitive touchscreen display, with pre-set protocols and possibility of extensive customisation of treatments.

A handprobe with performances that until recently seemed impossible

Soft Touch offers **the highest level of performance due to the synergy of radial effect shock waves with a unique vacuum system**. The probe gently sucks in the area to be treated and in an instant, it transfers the acoustic wave crossing fatty tissue. In this way, the focal area of the shock waves generator has dimensions that are significantly larger than other conventional technologies.

## How do Soft Touch shock waves work?

Soft Touch is an innovative method for applying shock waves to the area of the **body affected by cellulite**. Furthermore, it is extremely effective even in the preventive phase, contrasting genetic predisposition to the formation of orange peel skin.

Shock waves are acoustic waves that carry a quantum of energy in an infinitesimally short time on the treated area, stimulating **regenerative and recuperative processes**, to act on metabolic activity which causes the phenomenon of cellulite.

**Mechanical vibrations restore the elasticity of connective tissue** by improving skin tone and eliminating the presence of imperfections connected to cellulite with an excellent stability of results over time.

## Results

Results after 8 sessions

·Significant results after every single treatment  
·Improved elasticity and relaxation of connective tissue  
·Improved venous and lymphatic circulation locally  
·The only technology that effectively contrasts the causes of cellulite

Results after 3 sessions

Easy and intuitive software, which makes working extremely easy

New hardware and software technologies in the core of the system make Soft Touch more reliable, versatile and responsive than ever. The management software of the device has been cleverly programmed by our scientific team to be able to **calculate with extreme precision the amount of acoustic energy to be transferred to biological tissue**. Depending on the area selected, the software calculates the correct amount of energy by setting the number of hits, the frequency of the pulses and the power of the shock wave.
